

The sad state of text browsing

Yann Esposito

1. sad state, show HN, Reddit, worse, news websites, etc...
2. bad for disabled people
3. why not change the concept and make the provider of content not also provide the Look & Feel. User controlled display of content. Less money, more quality, is it possible
 - no js
 - text only
 - interaction? controlled one
 - user facing code, yes, only signature, all the rest looks like bullshit to me
4. not web 3.0, more like, fuck it, we need a BRUTALIST, Hacker-only oriented web. A safe place to talk between civilised people. What are the possible solutions
